

DEVESH RAJPUT

Palam, Delhi | P: +919359269477 | deveshrajput978@gmail.com | [CodeChef](#) | [Leetcode\(1720\)](#) | [Github](#)

Backend Developer with expertise in building scalable microservices and distributed systems. Strong foundation in **data structures, algorithms, concurrency & multithreading**.

EDUCATION

CHANDIGARH UNIVERSITY

Bachelor of Engineering

B.Tech Computer Science, GPA: 8.06/10

Chandigarh, PU

July 2018- July 2022

WORK EXPERIENCE

Software Developer Engineer I

MyGlamm | Good Glamm Group

Delhi, India

April 2022 – Jan 2025

- Scaled distributed notification microservice with async pipelines, retry queues, and fallback schedulers for third-party API resilience, handling high-throughput event processing with fault-tolerant retry mechanisms and idempotent message delivery.
- Reduced **payment order failures ~25%** by strengthening retry logic, timeout handling, and downstream dependency resilience in the checkout flow, improving transaction reliability and user experience.
- Developed and launched backend APIs for **The Mom's Co campaign** across India and the Middle East, supporting **10K+ user registrations** and traffic surges from the associated YouTube series, ensuring fault-tolerant multi-region deployment with consistent API performance and no production incidents during launch traffic surges.
- Eliminated a **critical production memory leak** by isolating inefficient resource handling in backend services, reducing container memory usage by **70%+**, preventing repeated restarts, and stabilizing services to **30+ day uptime**.

PROJECTS

Kernel-Level Memory Logger for Game Input Bug Analysis (TCNJ 2021 Winner)

- Developed a Windows kernel driver that reads process memory to log user inputs and internal state changes, enabling precise reproduction of intermittent software bugs.
- Implemented IOCTL communication between user-mode logger and kernel driver for safe memory access across processes.

BORING.io (Multiple Hackathon Winner)

- Built an NLP-powered web app that analyzes complex legal documents like Privacy Policies, Terms of Service, and EULAs, reducing average legal document **review time by 75%**, and breaks them down into simple, user-friendly summaries.
- Used Natural Language Processing (NLP) techniques (with spaCy & BERT) to extract key clauses, risks, and obligations.

ACHIEVEMENTS

- Winner of the IEEE Software Hackathon - **Jaypee University**
- Winner Autumn Hacks 2020 - **NIT Rourkela**
- Winner, Hack CBS 3.0 - **DTU**
- Winner HooHacks 2021 - **University of Virginia**
- Winner, Hack 2021 - **HackerEarth**
- Winner, Hackmanthan 2022 - **Raipur, Chhattisgarh Police**

SKILLS

Languages: C/C++, JavaScript, Python, x86 Assembly

Tools/Frameworks/Technologies: [Node.js](#), TypeScript, Express, FastAPI, LLM, PostgreSQL, DynamoDB/MongoDB, Docker, RabbitMQ, Redis, AWS(EC2, Lambda), GenAI, Linux Kernel Module
